

DRAFTING SOLUTION TECHNOLOGY

Drafting Solution Technology (DST) in conjunction with industry partner, Archolo, have joined forces to revolutionise the residential building sector.

They can turn your house plans into a stunning photorealistic model which you can walk around on a PC, laptop or even in virtual reality.

Virtual reality is an in-built option for every visual produced which gives you a realistic sense of immersion.

Where virtual reality is not desired, the visual is a powerful tool which allows you to clearly see, understand and playtest the modelled areas.

The visual allows clients to change materials on almost any surface, try different light fixtures and adjust furnishings to be sure of your material selections and interior design scheme.

Save money by understanding every aspect of

your plans and be making all changes before construction begins.

Cruise Parker and Jonno Ament are directors of DST and Archolo respectively, both having been students of architecture in Brisbane.

Cruise decided to go into the commercial services industry doing mechanical, electrical, fire, hydraulic and gas drafting for projects around the country and abroad.

Years later, after Cruise founded DST, the duo started working together to bring about a change to the building industry with the use of virtual reality.

Both Jonno and Cruise have been active in Queensland's video game developing community, where they have formed the Brisbane Unreal Engine Meetup which is officially sponsored by Epic Games of North Carolina.

While DST and Archolo use cutting edge gaming technology to deliver solutions for the

commercial and architectural industries, the software is heavily based in the video game developing industry.

The meetup aims to assist any person interested in developing apps or games with Unreal Engine.

Currently the partnership is modelling a variety of residential homes and commercial projects across Queensland and New South Wales, and further developing their services to cater for other industries wishing to utilise gaming technology to bring products to life.

For the ultimate visualisation experience, see how DST can help you.

From the client to site, DST and its partners are creating less waste, minimising time delays and ensuring clients are confident knowing they will get what they ask for well before work even starts on site.

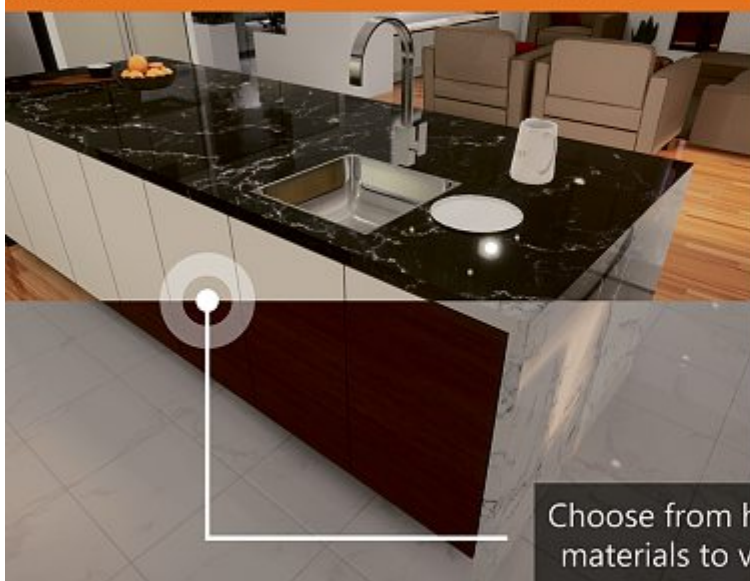

Cruise Kuss Parker.

See your home **before** it's built!
